

VANGUARD™ | BOOST

Efficient Ballot Issuance

Boost is part of the Verity Vanguard™ family of products that exceed VVSG 2.0 guidelines. Vanguard, a new platform for smart elections, was developed for defensibility, efficiency, and adoptability enabling Election Officials to move faster at every step of the election lifecycle and ensuring they can defend the outcomes of the elections that they oversee. Hart is the only manufacturer to offer a VVSG 2.0 EAC certified on-demand ballot printing solution.

Boost Efficiency with On-Demand Ballot Printing

Print full size ballots in the polling place on-demand from the attached COTS printer saving time, money, paper, and space, removing the need to pre-print or estimate ballot quantities. This low-cost option is custom built for elections and implements intentional security measures while remaining easy to use for poll workers. Boost optimizes the election process by ensuring that each voter gets the right ballot every time and keeps voter traffic moving.

Leading the Way in VVSG 2.0 Technology

Boost provides the smallest set up for on-demand ballot issuance. This device is air-gapped and integrates seamlessly with all electronic poll books. Eliminate extra work and reduce risk with one intelligent solution that controls the ballot chain of custody from a single, certified solution rather than from separate sources.

Smallest Set-up

For issuing ballots on demand, Boost and a compact printer set the standard for polling place efficiency. Weighing in at 8 pounds, Boost is easy to manage and minimizes your storage footprint.

One Holistic System

Control the ballot chain of custody from a single certified system rather than separate sources. Eliminate extra work and reduce risk with one intelligent system.

Intelligent Provisional Ballot Management

Boost automatically prints a provisional ballot stub for reconciliation purposes. Ballots marked provisional cannot be accidentally scanned, eliminating human error and ensuring the integrity of election results.

100% Air-gapped

Boost protects the integrity of your election data. Other vendor options plug directly into an online or networked poll book. With Boost, election data remains offline and insulated from unnecessary risk.

Prevent Scanning the Same Ballot Twice

As an additional safeguard, jurisdictions have the option to print Unique IDs on every ballot. Only Vanguard offers this added layer of security for ballots printed on demand.

Custom Built for Elections

Boost is the only VVSG 2.0 certified on-demand ballot printing solution that implements intentional security measures throughout while remaining easy to use for poll workers.

Integrates with All Electronic Poll Books

Automatically and efficiently select the right ballot style with AutoBallot, an optional handheld barcode scanner.

Onboard Thermal Report Printer

The built-in thermal printer does not require ink to print. Device reports can be printed at any time during the day.
