

VANGUARD™ | BOOST

Efficient Voter Self Service

Boost is part of the Verity Vanguard™ family of products that exceed VVSG 2.0 guidelines. Vanguard, a new platform for smart elections, was developed for defensibility, efficiency, and adoptability enabling Election Officials to move faster at every step of the election lifecycle and ensuring they can defend the outcomes of the elections that they oversee. Hart is the only manufacturer to offer a VVSG 2.0 EAC certified on-demand ballot printing solution.

Boost Polling Place Efficiency

Vanguard Boost is an optional on-demand printing solution that also provides independent self-service ballot activation with a VotePass™ ticket. VotePass is a single use, disposable paper ticket that allows voters to initiate their own voting session independently. The Boost on-demand ballot printing and VotePass model optimizes polling place traffic and saves money on consumables. This device is air-gapped and integrates seamlessly with all electronic poll books.

Leading the Way in VVSG 2.0 Technology

Boost with VotePass activation saves time by allowing voters to independently start their vote session. VotePass quickly activates the right ballot for voters on the Flex ballot marking device, removing the need to enter a code or manually select the right ballot style. Each VotePass ticket can only be used once and eradicates the need for costly smart cards. Single use VotePass tickets are thermally stamped after use, automatically preventing reuse.

Enhanced Security

Equipped with anti-counterfeit measures, such as the reflective stripe, and Hart's thermal stamping technology, VotePass Tickets certify that only valid vote sessions can be activated on the Vanguard Flex BMD.

Save Money and Time

Rather than using expensive smart cards that are prone to loss at each election, VotePasses are a low-cost paper ticket that can be disposed of after use. No need to waste time tracking inventory or rewriting cards for every election.

Smallest Set-up

Weighing in at just 8 pounds, Boost takes up minimal space for quick and easy access.

Efficient Voter Service

Reduce lines and keep voter traffic moving. No need for poll workers to escort voters or stand by to collect smart cards.

One Holistic System

Control the ballot chain of custody from a single certified system rather than separate sources. Eliminate extra work and reduce risk with one intelligent system.

Integrates with all Electronic Poll Books

Automatically and efficiently select the right ballot style with AutoBallot, the optional handheld barcode scanner.

100% Air-gapped

Vanguard Boost protects the integrity of your election data. Other vendor options plug directly into an online or networked poll book, potentially exposing ballots to bad actors.

Intelligent Provisional Ballot Management

Boost automatically prints a provisional ballot stub for reconciliation purposes. Ballots marked provisional cannot be accidentally scanned, eliminating human error and ensuring the integrity of election results.
