

# VANGUARD™ | FLEX

## Universal Ballot Marking Device

### Accessible Controls

Flex is equipped with a full range of accessibility features to ensure that every voter can vote privately and independently.

Vanguard Flex is part of the Verity Vanguard™ family of products that exceed VVSG 2.0 guidelines. Vanguard, a new platform for smart elections, was developed for defensibility, efficiency, and adoptability enabling election officials to move faster at every step of the election lifecycle and ensuring they can defend the outcomes of the elections that they oversee.

Verity Vanguard Flex is a universal ballot marking device that produces a 100% human verifiable ballot, offering two distinct positions for voters: standing or seated. The optimized screen viewing angles provide convenient access to the paper feed and touchscreen. Voters can either mark their ballots using the touchscreen interface or the comprehensive accessible controls. Set-up is simple: plug it in and turn it on.

# Leading the Way in VVSG 2.0 Technology

Flex provides a full range of accessible features for a customizable experience. At any time during the voting process, voters can choose the accessible features they prefer and can personalize settings without assistance. Only Vanguard allows voters to personalize settings once and those settings will remain throughout the entire voting experience from one device to another, providing automated end-to-end independence.

## Integrated Screens for Voter Privacy

Privacy screens double as screen protection for storage and transport, streamlining polling place set-up with fewer accessories to manage.

## Compact and Lightweight

Flex is the smallest and lightest BMD available, weighing just 16 pounds, with a 15-inch screen. The reduced footprint and unique nested design condense the required storage space.

## Integrated Thermal Ballot Printer

Flex is equipped with a fast, high quality built-in thermal printer which uses heat to print without ink. No need for expensive toner cartridges or external components.

## Onboard Report Printer

Print reports any time during an election without having to manually record the same information. Standardize poll worker processes with accurate, auditable and uniform reports. Save money by using thermal paper rolls instead of expensive ballot stock.

## Smart Batteries, Easy to Manage

Support for dual hot swappable batteries allows for automatic and continuous use in an emergency. Election workers can easily verify charge and swap batteries when needed, without cycling power. Batteries charge while the device is plugged in.

## Simple, Accessible Controls

Our simplified and intuitive controls have 2 buttons and a wheel, compared to competitors' 10+ buttons. This unique and innovative wheel navigation and low button resistance marries accuracy and ease of use, even for voters with limited dexterity.

## Onboard Power Passthrough

Enables seamless device connectivity for power, while the integrated, ruggedized cable simplifies and streamlines polling place set-up.

## Jam-Resistant Paper Path

Flex's innovative paper path supports improved "drop it in" technology that makes feeding ballots simple for voters.

## Verity Vanguard Delivers Next Generation Technology

Defensible | Efficient | Adoptable
