

# VANGUARD™

## Leading the Way in VVSG 2.0 Technology

### DEFENSIBLE

Demonstrates elections are conducted securely, fairly, and without error.

### EFFICIENT

Streamlines the elections process, end-to-end.

### ADOPTABLE

Minimizes the challenges of implementing a new voting system.

Introducing Verity Vanguard™, designed to deliver industry leading security and innovations that exceed VVSG 2.0 guidelines. Vanguard is a defensible, efficient, and adoptable family of products backed by over 110 years of election experience.

# Innovation that Goes Beyond VVSG 2.0

Vanguard is a reimagining of voting technology backed by market research, customer feedback, and significant investments in engineering, research, and development. A platform for smart elections, Vanguard fits seamlessly into Election Officials' existing processes and technology, enabling them to move faster at every step of the election lifecycle, and ensuring they can defend the outcomes of the elections that they oversee.

## Innovative Family Features Across All Vanguard Products

### Vanguard ID

This patented "always-on" smart label displays essential information for enhanced security, auditability, and efficient election management. Only Vanguard displays polling place and device "last use" details instantly and continuously, even when powered off.

### Restricted Access Alarms

The election media compartments are locked, alarmed, and support an additional tamper evident seal. Alarms and onscreen messages are triggered when there is unauthorized access to election media, scanners, and CFAST compartments when polls are open.

### Shielded Power Button

Thoughtfully placed away from election media and covered for protection against accidental or unauthorized powering off of devices.

### Smaller Footprint and Optimized Storage

Vanguard devices are the smallest in the market, making it easier for election workers to set up, transport, and store. The small footprint and nested storage design maximize your options for transportation, warehousing, and polling place set-up.

### 5-way Port Protection

Ports are protected from unwanted intrusion and manipulation with 5 layers of security:

- Door cover
- Hasp for tamper evident seal
- Non-standard wiring
- Keyed ports
- Ports disabled when not in use

### Powerful Power\*

An ecosystem of power features that work together to keep your elections up and running without intervention. Features include a dual battery option to double your backup power, integrated power cable for one step set up, and an onboard power passthrough that allows devices to be connected to one another for power.

\*Additional batteries must be purchased separately. Option only available on Flex and Vault products.

### BOOST

Efficient Ballot Issuance

### FLEX

Universal Ballot Marking Device

### VAULT

Secure Vote Capture

Discover the Verity Vanguard Family, with innovation that goes beyond VVSG 2.0
