

VANGUARD™ | FLEX

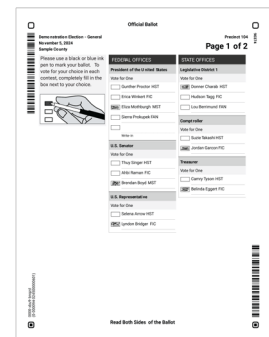

Universal Ballot Marking Device

Leading the Way in VVSG 2.0 Certified Technology

Vanguard Flex, a VVSG 2.0 EAC certified universal ballot marking device from the Verity Vanguard™ family. Vanguard, a new platform for smart elections, was developed for defensibility, efficiency, and adoptability, enabling election officials to move faster at every step of the election lifecycle and ensuring they can defend the outcomes they oversee.

Flex is a universal ballot marking device that produces a 100% human verifiable full identical ballot. **Cast votes are never hidden in QR codes or barcodes.** Voters can either mark their ballots using the touchscreen interface or the comprehensive accessible controls. Set-up is simple: plug it in and turn it on.

Full Identical Ballot

Leading the Way in VVSG 2.0 Technology

Flex provides a full range of accessible features for a customizable experience. At any time during the voting process, voters can choose the accessible features they prefer and can personalize settings without assistance. Only Vanguard allows voters to personalize settings once and those settings will remain throughout the entire voting experience from one device to another, providing automated end-to-end independence.

Integrated Screens for Voter Privacy

Privacy screens double as screen protection for storage and transport, streamlining polling place set-up with fewer accessories to manage.

Onboard Power Passthrough

Enables seamless device connectivity for power, while the integrated, ruggedized cable simplifies and streamlines polling place set-up.

Compact and Lightweight

Flex is the smallest and lightest BMD available, weighing just 16 pounds, with a 15-inch screen. The reduced footprint and unique nested design condense the required storage space.

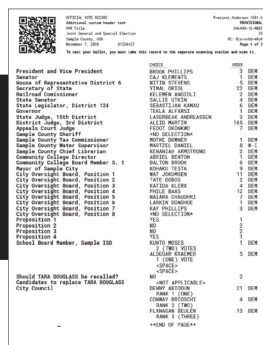

Smart Batteries. Easy to Manage.

Dual hot swappable batteries allows for automatic and continuous use in an emergency. Election workers can verify charge and swap batteries when needed, without cycling power.

Flex Is Even More Flexible

One Device, Two Paper Trail Options

Flex offers the versatility to support two paper-trail configurations.

Flex is configured to produce a summary ballot in a BMD polling place. The Summary Ballot is printed on the internal thermal printed and is 100% Voter Verifiable. No votes are ever stored in QR codes or barcodes.
